Projects

• OTP Generation

I have created loan application site. In that customers can apply for the loan by filling required details. Like full name, pan no, loan amount,etc. Based on the loan amount interest rate will calculate and display. After successful registration user will get 4digit otp with name and email address which customer mentioned in the form. On next page user have to enter the 4 digit otp. If otp is correct then successful msg will show otherwise wrong otp msg will show with the left attempt.

• Resume Rescue

I have created a Resume Rescue website UI with angular. In that user have to register first and then user can create own resume. User have to fill all the required details. While creating this project I have successfully implement the reactive form concept, Service, components,etc concepts.
